

ABSTRACT OF THE DISCLOSURE

A storable, expansible, high-rise, pet barrier for preventing pets from accessing furniture. The barrier has a plurality of pivotally joined members expansible to a length at least substantially equal to the front facing width of a section of furniture. In its
5 expanded state, the barrier has members distributed along its width for blocking the entry of a pet and having a height at least substantially equal to the height of the legs of a pet. The barrier has a plurality of hinge connectors joining the members together, the connectors including upper hinge connectors and lower hinge connectors to which converging joined members are pivotally attached. The joined members are collapsible to
10 a compact, side-by-side state for storage.
